SCESCM is a biennial international conference focusing on sustainability concept implemented in design, construction and maintenance in any civil engineering structure. The conference is conducted on a rotational basis, every two years since 2012 and is increasingly enriched by outstanding keynotes, invited papers and selected participant’s papers sharing the latest scientific findings and achievements among civil engineers across the globe.

The theme for the 5th SCESCM 2020 which will be held on 11-13 August 2020 “Transforming the World, Foster the Sustainable Development Goals (SDGs)” expresses the comprehensive range of issues and development in the area of civil and infrastructure. The conference is aimed at providing fresh perspectives on latest developments in design, construction and maintenance in any civil engineering structure and infrastructure facilities towards sustainability.

TOPICS/AREAS:

- Green construction materials and technologies
- Construction management
- Construction method and system
- Optimization and innovation in structural design
- Environmental impact and green design
- Local and recycled materials
- Forensic engineering
- Structural health monitoring systems
- Assessment and retrofitting
- Hybrid and composite structures
- Smart materials and structures
- Special structures
- Structural dynamics and earthquake engineering
- Structures in severe environment
- Disaster mitigation and restoration
- Structural Analysis
- Bridge Engineering
- Building Information Modeling
- Railway Engineering
- Smart Cities
